What is NCyTE?

NCyTE is a National Science Foundation-funded national resource center including members from community colleges, universities, high schools and industry working together to grow and strengthen our nation's cybersecurity workforce. NCyTE is committed to improving the quantity and quality of existing cybersecurity resources and building upon these resources to develop effective training and teaching materials, with the ultimate goal of strengthening cybersecurity education programs and the workforce across the U.S.

What NCyTE offers high schools

NCyTE is building a world-class one-stop repository of resources, support and professional development for cybersecurity educators:

- Cybersecurity curriculum free for download to help augment and support teaching

- College Board–endorsed "AP Computer Science Principles: Cybersecurity" curriculum, melding computer science and cybersecurity into one year-long introductory course

- Set of 13 cybersecurity concept lessons designed to be integrated into AP Computer Science Principles course

  - Interactive online mini-lessons to make your class more dynamic

  - "How-to" materials to help you host cybersecurity camps for high school students

  - Support to get your school started with competitions like CyberPatriot and National Cyber League

Why your high school should join NCyTE

- Membership is FREE for eligible U.S. high schools that apply

- Network with cybersecurity teachers and faculty in more than 30 states

- Eligibility to receive travel stipends to attend cybersecurity education conferences

- Stay up to date on new opportunities through free monthly webinars and email newsletter
